 Supplementary Information..... 8

 Figure 1: 9

Greetings

The following report has been created to support customer expectations regarding Business Continuity Plan validations and testing activities for selected Microsoft Online Services.

This report is a part of our efforts to satisfy our customers' business continuity requirements and as such, we welcome your feedback and are committed to continuous improvement. If you have additional questions or feedback, please send an email to the Customer Experience Team at BCPReport@microsoft.com

Introduction

At Microsoft, we recognize that the unexpected can occur at any time. According to our established corporate policy, each of Microsoft's online services must have an established Contingency Plan, which is required to be reviewed and tested at least once every 12 months.

This document is published on a quarterly basis, and will contain updates from the preceding quarter. It is not a living document that is updated every time a test occurs, so naturally *there may be instances where a test is due or has already been completed, but the report has not yet been updated.*

Additionally, this report is intended to reflect the validation status, test result, and compliance for a *representative subset* of Microsoft's services. **This report is not intended to reflect the status of each of Microsoft's ~17,500 services.** Customers can rest assured that testing & review are conducted annually for **every** Microsoft service per Microsoft policy, which is evidenced by our Audit Reports and ISO 22301 Certification. More information available in Appendix A.

This report does not include information on additional resiliency testing that each service performs more frequently as part of normal operations. *We encourage you to review the [resources](#) noted at the end of this report for additional details on our Business Continuity program and our compliance to industry standards in the form of audit reports.*

The following services are included in this report:

Online Service	Component
Microsoft 365	• Exchange Online • SharePoint Online & OneDrive for Business • Microsoft Teams • Viva Engage • Office Online • Microsoft Intune
Azure	• Azure Storage • Azure SQL DB • Azure Compute (IaaS)
Microsoft Entra ID	• Microsoft Entra Domain Services

	• Microsoft Entra ID Authentication (STS) • Microsoft Entra ID SCIM Provisioning • Microsoft Entra ID Self-Service Password Reset (SSPR) • Azure Multi-factor Authentication (MFA) • Microsoft Entra ID Application Proxy
Dynamics 365	• Dynamics 365 Commerce • Small and Medium Business • Customer Data Platform
Power Platform	• Power BI • Power Automate • Power Apps • Power Pages
Windows 365	• Windows 365
Copilot	• Copilot Studio • Copilot for Microsoft 365
Microsoft Purview	• Microsoft Purview Audit • Microsoft Purview Communications Compliance • Microsoft Purview Compliance Manager • Microsoft Purview Data Classification • Microsoft Purview eDiscovery • Microsoft Purview Information Governance & Records Management • Microsoft Purview Information Protection • Microsoft Purview Insider Risk Management

Additional compliance information can be viewed on the [Service Trust Portal](#), which provides access to documents that cover Microsoft’s compliance, security, products, and services. A key resource offering that we recommend for customers to review audited controls is [Microsoft Purview Compliance Manager](#).

Purview Compliance Manager is a workflow-based risk assessment tool, enabling companies to track, assign, and verify their regulatory compliance activities related to Microsoft cloud services. Compliance Manager combines information Microsoft provides auditors and regulators during third-party audits of Microsoft cloud services against industry standards (ISO 27001, FedRAMP, NIST, etc.) with Microsoft internal information related to compliance with regulations such as HIPAA and the GDPR. The tool further provides customers with the ability to self-assess proprietary compliance with these same standards and regulations.

Customers can export Microsoft Excel reports that detail the compliance activities performed by Microsoft and customer organizations, which can be provided to auditors, regulators, and other compliance stakeholders.

Microsoft *highly* recommends using Compliance Manager to review the results of the most recent third-party audit of the NIST 800-53 Contingency Planning (CP) controls. This will provide you with a high level of detail regarding individual service Business Continuity Plans, validations, and other metrics that may be useful for customers seeking to update or create their own BCPs.

Plan Validations & Maintenance Record

Any findings uncovered during plan validations are tracked and must be closed prior to the next validation or a risk finding must be documented. Please note that **this report focuses on a subset of our online services**, and that all online service Business Continuity and Disaster Recovery plans are tested regularly according to Microsoft's [Enterprise Resilience and Crisis Management \(ERCM\) Program](#).

Microsoft 365

Component	Validation Date (mm/dd/yyyy)	Test Level ¹	Test Result ²	Compliance to Standards ³
Exchange Online	01/07/2025	7	Pass	Yes
SharePoint Online & OneDrive for Business	12/04/2024	7	Pass	Yes
Microsoft Teams	08/22/2024	5	Pass	Yes
Viva Engage	03/05/2025	4	Pass	Yes
Office Online	10/09/2024	5	Pass	Yes
Microsoft Intune	02/07/2025	4	Pass	Yes

Azure

Component	Validation Date	Test Level	Test Result	Compliance to Standards
Azure Storage*	05/20/2025	4	Pass	Yes
Azure SQL*	10/30/2024	5	Pass	Yes
Azure Compute (IaaS) *	N/A *	N/A **	Pass	Yes

* Regional services. Customers are responsible for deploying instances in multiple regions and implementing regional resiliency.

** Compute platform provides IaaS VMs, VM Scale sets, VM images, Managed Disks, Compute usage, SDK/PowerShell/Node. Customers are responsible for implementing regional resiliency on the application level, as well as conducting any testing that may be required.

¹ See [Figure 1](#) for more detail on Test Levels

² Pass/Fail indicates whether the test was completed successfully (e.g. a successful 'failover' per the scenario)

³ Compliance to Standards indicates that a service meets all requirements established by the ERCM Program. For instance, the Business Continuity Plan and all supporting documents must be reviewed and updated within 12 months of the last review.

Microsoft Entra ID

Component	Validation Date	Test Level	Test Result	Compliance to Standards
Microsoft Entra Domain Services	01/30/2025	5	Pass	Yes
Microsoft Entra ID Authentication (STS)	07/29/2024	6	Pass	Yes
Microsoft Entra ID SCIM Provisioning	04/23/2025	5	Fail	No ⁴
Microsoft Entra ID Self-Service Password Reset (SSPR)	10/11/2024	5	Pass	Yes
Azure Multi-factor Authentication (MFA)	01/30/2025	5	Pass	Yes
Microsoft Entra ID Application Proxy	01/10/2025	5	Pass	Yes

Dynamics 365

Component	Validation Date	Test Level	Test Result	Compliance to Standards
Dynamics 365 Commerce	01/22/2025	5	Pass	Yes
Small and Medium Business	02/19/2025	5	Pass	Yes
Customer Data Platform	11/10/2024	4	Pass	Yes

Power Platform

Component	Validation Date	Test Level	Test Result	Compliance to Standards
Power BI	05/01/2025	5	Pass	Yes
Power Automate	10/23/2024	4	Pass	Yes
Power Apps ⁵	02/10/2025	5	Pass	Yes
Power Pages	04/09/2025	5	Pass	Yes

⁴ A Disaster Recovery (DR) test for this service was conducted on April 23, 2025. During the exercise, several issues were encountered that prevented successful completion, resulting in the test being classified as a failure. Consequently, the service is currently designated as non-compliant, and remediation efforts are actively underway.

The associated risk is being tracked internally, and the product group is working to address the identified issues, with a targeted resolution date of August 2025. Additional DR tests are scheduled for July and September 2025 to validate the implemented fixes and confirm the service's recovery capabilities.

⁵ Power Apps is built on top of several micro-services. As such, the metrics listed here represent a summarized view of those micro-services that are critical for recovery.

Windows 365

Component	Validation Date	Test Level	Test Result	Compliance to Standards
Windows 365	01/12/2025	5	Pass	Yes

Copilot

Component	Validation Date	Test Level	Test Result	Compliance to Standards
Copilot Studio	10/23/2024	4	Pass	Yes
Copilot for Microsoft 365	01/07/2025	7	Pass	Yes

Microsoft Purview Solutions

Component	Validation Date	Test Level	Test Result	Compliance to Standards
Microsoft Purview Audit	02/18/2025	5	Pass	Yes
Microsoft Purview Communications Compliance	01/22/2025	5	Pass	Yes
Microsoft Purview Compliance Manager	05/06/2025	4	Pass	Yes
Microsoft Purview Data Classification	02/19/2025	5	Pass	Yes
Microsoft Purview eDiscovery	01/17/2025	5	Pass	Yes
Microsoft Purview Information Governance & Records Management	03/11/2025	5	Pass	Yes
Microsoft Purview Information Protection	01/29/2025	5	Pass	Yes
Microsoft Purview Insider Risk Management	01/14/2025	5	Pass	Yes

Appendix A

Supplementary Information

For all other program information, we encourage you to review the following sources:

- [Microsoft General - Enterprise Resilience and Crisis Management \(ERCM\) Program Description](#)
 - The Enterprise Resilience and Crisis Management (ERCM) Customer Statement provides an overview of Microsoft's resilience and crisis management model, our methodology, how we work across this large, global company, and our approach to delivering on the resilience and crisis management needs of our customers.
- [Enabling Customer Resilience in the Cloud](#)
 - This document is designed to support Microsoft customers in achieving their resilience and Business Continuity and Disaster Recover (BCDR) goals. It outlines the shared responsibility model between Microsoft and customers and provides guidance on how to leverage Microsoft's robust tools to ensure resilience and continuity in the face of disruptions.
- [Microsoft General - Microsoft Security Program Policy \(1.10.2025\)](#)
 - This covers broad Security policy across Microsoft, which includes Business Continuity Management policy in section 13.
- [Microsoft Compliance Offerings](#)
 - Here, Customers can find information about our 3rd-party audit reports and certifications related to a variety of internationally recognized risk control frameworks (including [ISO 22301](#), which is focused on Continuity Planning).
- [Datacenter threat, vulnerability, and risk assessment - Microsoft Service Assurance | Microsoft Learn](#)
 - This site details how Microsoft assesses Threat, Vulnerability, and Risk Assessment (TVRA) at the datacenter level. TVRAs are performed annually and are designed to help you understand how Microsoft identifies and mitigates the impact of physical and environmental threats to Microsoft datacenters.
- [Service Level Agreement for Microsoft Online Services](#)
 - We provide financial backing to our commitment to achieve and maintain the service levels for each service. If we do not achieve and maintain the service levels for each service as described in the Service Level Agreement, then you might be eligible for a credit towards a portion of your monthly service fees.
- [M365 Service Resilience and Customer Guidance](#)
 - These documents guide customers through Microsoft 365 service resiliency principles, while exploring the various options customers have to improve business continuity in the event of service disruption within Microsoft 365, on-prem infrastructure, or third-party providers.

Figure 1:

The following chart describes the levels of BCP tests. Please note that these tests are purely for the purposes of validating Business Continuity Plans themselves and are separate from any additional testing that a service may engage in, such as fault-injection or other methods of testing failover and resiliency. Higher level tests encompass all requirements from lower levels as well.

Level ⁶	Test Level Description
Level 0	Not Tested
Level 1	Call Tree: A disaster recovery call tree exercise is conducted where calling responsibilities, order, and systems are used to contact critical personnel as would occur during a real disaster, emergency, or severe outage.
Level 2	Tabletop: This type of test is a review and discussion of a particular type of disaster scenario, a walkthrough of the actions that would be taken according to the DR plan, and assessing the effectiveness of the plan in that context, without actually performing the actions. Representatives of a single team, or multiple teams, may participate in the exercise typically under the guidance of exercise facilitators.
Level 3	Simulation: Structured walkthrough of disaster recovery and response procedures conducted in a tabletop environment.
Level 4	Pre-production environment for target application: DR test is conducted in a pre-production environment for the target application. Note that pre-production environments mimic production as much as possible to provide useful test data.
Level 5	Production environment for the target application: DR test is conducted in the production environment for the target application.
Level 6	Production environment for the target application and all dependencies required for recovery: DR test is conducted in the production environment for the target application, including all critical dependencies required by the application to recover or run.
Level 7	Production environment for target application and all dependencies required for recovery, as well as all applications that are dependent on the target application: DR test is conducted in the production environment for the target application, including all critical upstream and downstream dependencies required for a business process.

⁶ These test levels have been developed as part of Microsoft's Business Continuity Planning Programs, Policies, & Standards
